DNA Identifies Humans as Main Source of Danube Fecal Pollution

22 Jan 2018 - 09:29 by Local Press Report
KREMS AN DER DONAU

[Phys.org](#)

Despite wastewater management and treatment plants, human waste remains the main source of microbial faecal pollution in the river Danube. A comprehensive analysis of faecal pollution in the Danube used a new molecular genetics method that enables the clear differentiation of human microbial faecal pollution from that of animal origin.
